Who we are

The history of Fatra, a. s. dates back to 1935, when it was founded on solid of Bata foundation. Over the course of our operations, we have adapted to modern trends and, thanks to innovation and new technologies, we are now one of the world's leading plastics processors and an integral part of the European plastics industry.

Our most valuable resource is our people, who drive the company. Together, we form one large team of more than 1,250 employees that creates cutting-edge products and specialised customer solutions that include not only manufacturing, but also consulting services, research and development.

More than 70% of our production goes abroad. We operate two production centres in Central Europe with state-of-the-art technologies, where we process PVC, PE, PP, EVAC and PET raw materials.

Our products can be found every day at almost every step; in the construction, healthcare, consumer, automotive, electrical, food, haberdashery and footwear industries.

Fatra strives to fulfil the vision of the Integrated System Policy by achieving and maintaining a high level of product and service quality, environmental protection and occupational health.

The first flooring materials were produced in Fatra more than 70 years ago. This makes us not only one of the oldest and most experienced companies in Europe, but also in the world. We develop, design and create innovative design products that find their application in both the commercial and residential sectors and that meet the strictest standards for a healthy and clean indoor environment.

The LINO Fatra PVC floor coverings and accessories now offer a wide range of options for every project. In our portfolio, you will also find solutions for specific spaces to withstand daily intensive loads that are easy to maintain and, last but not least, look and feel good. It is the floor that creates the basic visual element of any interior.

We believe that our new collection of homogeneous and heterogeneous floor coverings, wall coverings and accessories will be the basis for inspiring every customer and satisfying their needs.

Sustainability first

Sustainability is not just a word for us, it is a fundamental element of our business. We see it as a long-term commitment to be better at everything we do.

We have a long-standing commitment to protecting the environment and we undertake annual activities to reduce the carbon footprint of our products. These activities include, among others, reducing water and energy consumption in the production of our products. We are gradually installing renewable energy generation equipment and using secondary energy sources.

We place great emphasis on the professional development of our employees. However, we develop not only ourselves, but also our surroundings. We cooperate in the economic, cultural, social and sporting development of the region.

Fatra floors for your future

Our floor coverings guarantee an attractive modern look, high functionality and quality combined with a long service life. By choosing our floors, you not only get a quality product to suit your needs, but also a product designed with respect for the environment, taking into account key aspects of sustainability. You also share our values and attitude towards our planet and the life on it.

- When developing products, we conduct life cycle assessments (LCA) of their environmental impact.
- We have an Environmental Product Declaration (EPD) for our floor coverings, which documents the environmental credentials of our products from their inception to their disposal.
- All the raw materials we use are compliant with the REACH chemical legislation and the legislation applicable to construction products.
- We use phthalate-free flooring technology.
- The proportion of our in-house recycled materials in the production of flooring underlayers is up to 80%.
- The anti-slip and antibacterial treated PUR layer guarantees the safety and high hygiene standard of our floor coverings.
- All our floors are characterised by low emissions of volatile organic compounds (VOC), which has been verified by the relevant institutions in the Czech Republic and abroad:
 - State Institute of Health Prague
 - German Institute for Building Technology (DIBt)
 - Eurofins Product Testing Denmark A/S Institute.

Membership and Certification

Bureau Veritas

Environmental protection has long been a major focus of our attention. We have a certified quality system according to ČSN EN ISO 9001:2016 and an environmental management system according to ČSN EN ISO 14001:2016.

Responsible Care

We are guided by the principles of the Responsible Care programme, in which, as a member of the Chemical Industry Association of the Czech Republic, we undertake to manage our activities in such a way as to ensure a high level of sustainable development by responsibly improving the safety of our facilities, product transportation, human health and environmental protection. Thanks to our long-term compliance with these criteria, we have been granted the prestigious "Sustainable Development Award".

VinylPlus

We are a member of VinylPlus. We are making a long-term commitment to sustainability in the PVC industry. The main objective is to promote a circular economy and more efficient use of resources.

EPD

We have developed an Environmental Product Declaration, which is an independently verified and registered document that declares the environmental impact of products throughout their life cycle.

Cleanroom

Our Electrostatic A, Dynamik A and Garis SD floor coverings meet the most stringent conditions for use in cleanrooms. Suitability for use in this environment is guaranteed by the renowned German Fraunhofer IPA Institute, which has awarded us Cleanroom Suitable Materials certification after extensive testing.

Modern production technologies

Our goal is to become an even more modern and automated company. In 2021, we started production at our new rolling mill, expanding not only our production capacity but also the breadth of our product portfolio.

Using European manufacturing technologies, we offer the highest quality and design not only for commercial but also for residential solutions.

Our research and development experts are constantly looking for ways to innovate our products in an environmentally friendly and sustainable way.

The quality of our production is subject to the strictest criteria:

- Use of our own laboratories equipped with modern analytical instruments
- Guarantee of a high standard of supplier selection and control of input raw materials
- Multi-stage control of the production process
- Keeping all production documentation in electronic form
- Tracking the flow of materials using barcodes

Surface structure - texture

SILVER block - Antibacterial activity of PUR varnish

In addition to their aesthetic and utilitarian function, floor coverings must meet the highest hygiene standards, which is why the top layer of our floor coverings is created using UV-curable PUR varnish. The cured PUR varnish creates a continuous coating that enhances the attractive appearance of the decking, increases the resistance of the surface to chemicals and makes maintenance easier.

The PUR varnish is treated with the SILVER block method, which creates a shield against the undesirable action of microorganisms. The protection is achieved by incorporating additives based on silver compounds into the varnish formulation: the silver ions become a permanent part of the coating once the varnish has cured. The effectiveness of the SILVER block protection has been tested and verified by an independent testing laboratory according to the international standard ISO 22196:2011.

The main advantages of the SILVER block treatment of the PUR varnish:

- Protection against bacteria by following the instructions for regular therapy*
- Effectiveness proven by a test conducted by an independent testing laboratory
- High resistance to chemicals and stains

*) The detailed procedure for the cleaning, treatment and maintenance of floor coverings with a PUR coating is set out in the relevant laying code available on the website www.fatrafloor.com.

HETEROGENEOUS FLOOR COVERINGS

Heterogeneous PVC floorings consist of several layers differing in composition or design. The thickness of the wear layer determines the degree of load and the area of application. Thus, they represent a solution for commercial and residential construction, but also light industry.

Heterogeneous floor coverings are available in rolls of 1,500 mm and 2,000 mm widths, offering a rich design possibilities thanks to their wide range of patterns.

Advantages of heterogeneous PVC:

- Attractive appearance
- High wear resistance
- Resistance to commonly used chemicals
- Possibility of laying over underfloor heating
- Resistant to the impact of wheeled office chairs
- Mutual combinability of decors
- Bacteria-resistant surface
- Wide range of accessories (step edges, skirting boards, welding cords)

SPECIAL HOMOGENEOUS FLOOR COVERINGS

Antistatic and electrostatically conductive PVC floorings are a group of special coverings that meet the demanding requirements for electrical properties of floorings. They represent a highly efficient solution in interiors where the emphasis is on ensuring safety needs.

ELEKTROSTATIK electrostatic floorings are sought after for their excellent electrical conductivity (internal electrical resistance $\leq 1 \cdot 10^6 \Omega$). They can be used in laboratories, operating theatres or X-ray departments.

DYNAMIK (internal electrical resistance $\leq 1 \cdot 10^8 \Omega$) and GARIS SD (internal electrical resistance $\leq 1 \cdot 10^9 \Omega$) antistatic floorings are distinguished by their electrical conductivity. They are suitable for areas where electrostatic discharges must be prevented. This covering prevents the formation of electrostatic voltages on persons moving on it or on components placed on it. It is suitable for installation in computer rooms, telecommunications or electronics manufacturing.

We offer the ELEKTROSTATIK and DYNAMIK special homogeneous floorings in the 608 x 608 mm tile format, and GARIS SD in the form of 1,500 mm wide rolls.

Advantages of special homogeneous PVC:

- High wear resistance
- Resistance to commonly used chemicals
- Possibility of laying over underfloor heating
- Resistant to the impact of wheeled office chairs
- Mutual combinability of decors
- Easy maintenance
- Bacteria-resistant surface
- Wide range of accessories (step edges, skirting boards, welding cords)

Special floor coverings maintain consistent composition and design throughout their entire thickness

HOMOGENEOUS FLOOR COVERINGS

Homogeneous PVC floorings consist of only one layer that is identical throughout the entire thickness of the covering. This provides a durable solution for applications in high-traffic areas. Thanks to the durability of the surface and its easy cleaning, they are particularly suitable for schools and healthcare facilities, as well as other public areas.

Praktik pressed homogeneous flooring is supplied in the form of 608 x 608 mm tiles, which is glued to the subfloor and then welded with welding cords.

Advantages of homogeneous PVC:

- High wear resistance
- Resistance to commonly used chemicals
- Possibility of laying over underfloor heating
- Resistant to the impact of wheeled office chairs
- Mutual combinability of decors
- Easy maintenance
- Bacteria-resistant surface
- Wide range of accessories (step edges, skirting boards, welding cords)

Homogeneous floor coverings maintain consistent composition and design throughout their entire thickness

WALL COVERING

Our product range is complemented by the MODUL heterogeneous wall covering, which is supplied in a roll of 1,500 mm width. It meets hygiene standards to ensure a clean indoor environment. The surface of the protective covering is easy to clean thanks to the PUR layer, excels in durability and reduces maintenance costs.

It can be used in buildings with intensive traffic, where high requirements for hygiene and protection against mechanical damage to the walls are imposed.

Advantages of PVC wall covering:

- Colour fastness in artificial light
- Product reaction to fire (B-s2, d0)
- Dimensional stability
- Stain resistance
- Sound insulation

Instructions for the installation, care and maintenance of PVC floor coverings and wall coverings

Storage

The rolls must be stored at a temperature of +5 °C to +35 °C in a dry and dust-free indoor area, min. 1 m from heat sources. Flooring must be protected from the effects of direct sunlight and artificial lighting with a high UV component.

Installation

- The installation of the covering is carried out using the technology according to the relevant installation code of the manufacturer.
- We recommend that the covering is installed by a professional flooring company.
- Visually check the quality of appearance and execution before laying the covering.
- In case there are visible appearance defects, do not install the covering and contact seller.
- The covering is not suitable for free laying; it is laid by full surface bonding with dispersion or solvent-based adhesives recommended by the manufacturer.
- Immediately after laying, the covering must be rolled using a 50 kg segmented roller.
- Before installation it is necessary to:
 - roll out the covering in rolls and stabilise the surface and dimension at a temperature above +18 °C for 48 hours,
 - temper the covering in parts at a temperature above +18 °C for 48 hours.
- The underlay for laying must be flat, smooth, free of cracks and dust, sufficiently firm, clean and dry. Unevenness, grease stains and other defects must be removed.
- Coverings must not be glued in rooms that are not sufficiently insulated against underfloor moisture and in rooms with underfloor heating systems if the surface temperature permanently exceeds +28 °C.
- The room and underlay temperature must not fall below +18 °C during installation.
- For floor coverings with regular decor, there is no continuity of the pattern between the individual planks or parts guaranteed.
- During installation:
 - for coverings in rolls, there is serial number each roll that must follow one after the other in installation process,
 - coverings in parts must follow the laying direction indicated by the arrow on the back side of the part to avoid differences in the shade of the installed floor covering,
 - it is not recommended to combine different production batches.

FLOOR AND WALL COVERING TREATMENT

- The detailed procedure for cleaning, treatment and maintenance of covering is set out in the relevant laying code.
- For normal cleaning of the covering, lukewarm water is used with the addition of a cleaning agent designed for the type of floor covering.
- The covering must be protected against staining with asphalt, products containing dyes and organic solvents and against contact with burning and smouldering objects.
- Rubber products in contact with the covering cause an irremovable colour change of the covering.
- Any surfaces of movable furniture which are in contact with the covering must be provided with suitable protective equipment [e.g. plastic glider, textile mat, PET mat for wheelchairs ("W" type wheel - soft plastic on a hard core)].
- We recommend protecting the flooring with a suitable shading technique.

Further information can be found on the manufacturer's website www.fatrafloor.com, in the relevant laying code for LINO Fatra PN 5410/97.
